TOUCHING DOWN

WHERE DO WE STAND?

We stand with you. Whoever you are – a client, a colleague, a supplier, someone who lives or works in, or is just passing through, a building we've designed. We stand with you because, for us, architecture is all about people. Get to know them and what's important to them, connect with them and collaborate, deal with them respectfully and with integrity and, together, you can solve any problem, overcome any challenge and achieve any ambition. That's what it takes to create sustainable, innovative, valuable and positive architecture. Architecture that improves lives, builds communities and enhances society.

Life touching design.

UEA students urged to urinate in shower

Chris Dobson and Debs Torr want people to declare their support for their shower challenge on social media

University students are being urged to urinate in the shower in a bid to save water.

The Go with the Flow campaign is the brainchild of students Debs Torr and Chris Dobson, from the University of East Anglia (UEA) in Norwich.

They want the university's 15,000 students to take their first wee of the day while having their morning shower.

Mr Dobson, 20, said the idea could "save enough water to fill an Olympic-sized swimming pool 26 times".

The pair want those taking part to pledge their allegiance on Facebook and Twitter and have offered gift vouchers to the first people to join the challenge.

Go with the Flow

Water savings could result in:

720m litres

annually if everybody in the UK took part

£42.5m per year if population of East Anglia backed campaign

£125k per year if all UEA students accepted challenge
